

# **The Cadastre: An Instrument for the Development of the Society**

**Antonio BENVENUTI and Bruno RAZZA, Italy**

## **Key words:**

## **SUMMARY**

The development of a society takes place through an essential, dynamic and integrated market.

The management of the procedure is fundamental for a regular and constant growth.

The knowledge of the territory and of the real estate, the guarantee of the rights of ownership, the values of properties are essential elements for a correct management of “public goods”.

An efficient “cadastre”, adequately preserved and updated, allows a town planning development of the territory, an equalized tax system and a data bank necessary for the management of services.
