

Developing Data Content

Building the National Data Framework

- Understanding
 - Patterns
 - Relationships
 - Processes
- Conceptualizing
- Modeling
- Visualizing

Geography Embodies Formal Concepts, Theories, and Methods

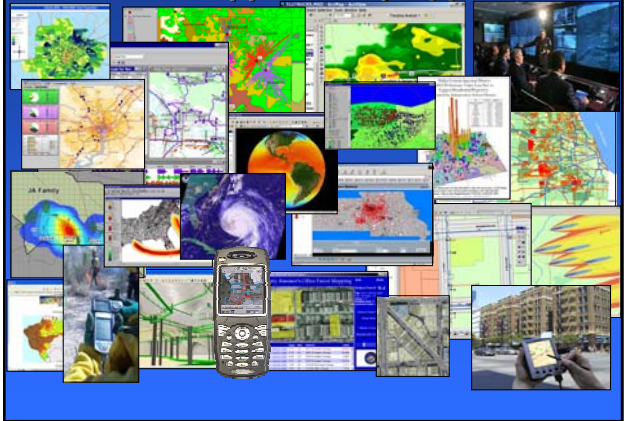

... For Understanding Our World

Building Data Content Requires Varied Expertise and Study

- Technical Expertise
 - Geodesy
 - Geography
 - Surveying
 - Cartography
 - Photogrammetry
 - Geographic Knowledge
 - Discipline Specialists
 - Project Management....

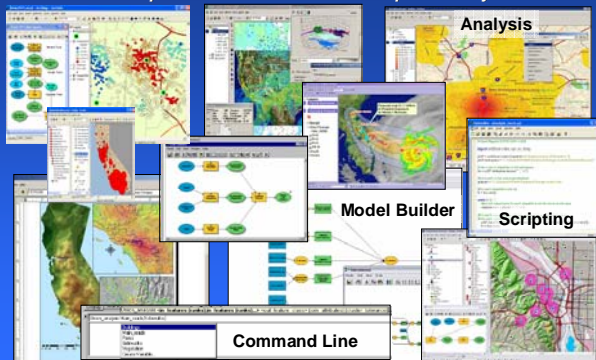

Data must support many Applications

Geoprocessing Framework

A Comprehensive Environment for Spatial Analysis

... and Application Development

Real Time GIS

... Connecting People
... Enabling Collaborative Work

Supporting Portals

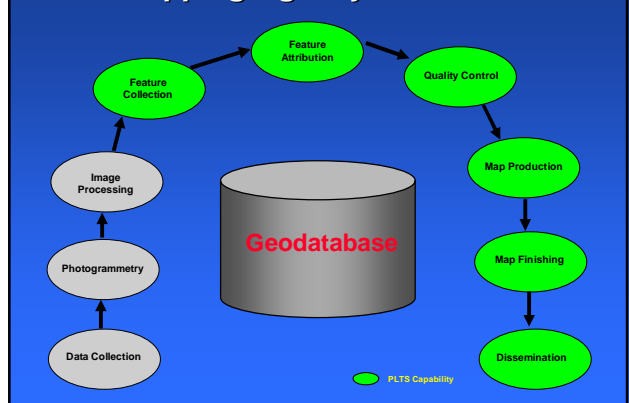

Services Oriented Architecture (SOA)

Provides a Framework for Integrating GIS and Enterprise Systems

... Open, Flexible and Standards Based

Mapping Agency Workflow

Data Production Tools (PLTS)

- Database Production Environment
- Knowledge Base of Map Specifications
 - Valid Value Tables
 - Condition Tables
- Editing Tools
- Feature Attribution, Validation and Symbolization
- Complete set of QC/QA Tools (QCView)
- Digital and Hard Copy Chart Production (MPS)
- Project Tracking for internal or external production (JTX)

Production Line Tool Set

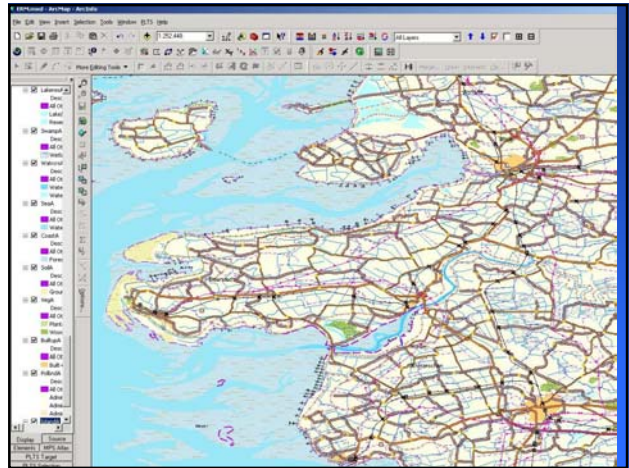

Standardized Templates, Applications and Workflows

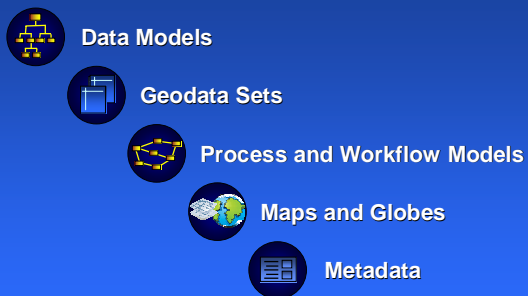

... For GIS Database and Map Production

Data Content Quality Assurance

- **Define a Quality Assurance Plan**
 - Define Data Quality Standards (ex: ISO 9001:2000)
 - Define and Review QA plans
 - Identifying quality problems
 - Defining QA/QC tools (PLTS) and automated processes
 - Define Data Acceptance
 - Developing application test plans
- **Defining Data Deliverables**
 - File naming consistency
 - Attribution
 - Projections
 - Topology validation

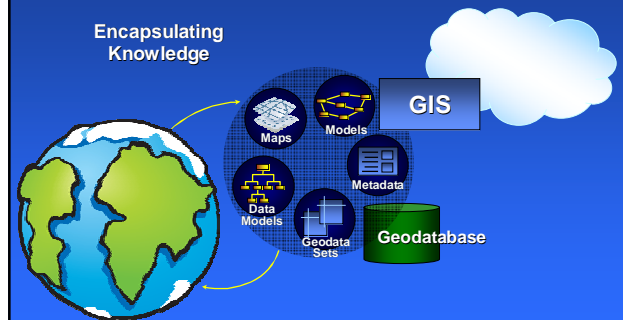

GIS Abstracts Geography Into Five Basic Elements

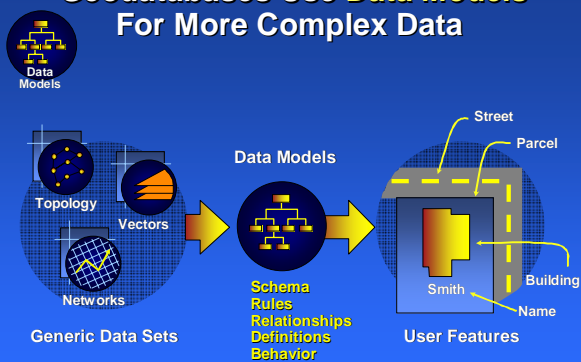

... Together They Represent the Building Blocks of Geographic Knowledge

GIS Manages These Elements in a Geodatabase

Geodatabases Use Data Models For More Complex Data

With Rules That Define Relationships and Behavior

GIS Networks Will Allow Us to Connect and Integrate Distributed GIS Resources

... Making Virtual Collaborations Possible

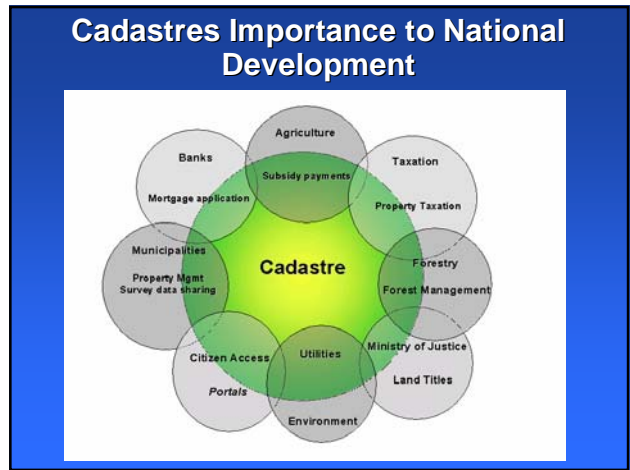

Data Interoperability Extension

Adds Many New Data Sources and Converters to ArcGIS

Integrated with ModelBuilder Direct Read & Use

Creating Custom Format Converters

... Supports Complex Data Transformation

ArcGIS™ Cadastre 2014 Data Model - Early Draft

Based on the International Federation of Surveyors/UN Cadastre 2014 Vision

April 14, 2009

Thematic Layers for an ArcGIS Data Model

Lantmateriat

ArcCadastre

Summary

- Provide technical expertise critical to success
- Study the applications required to determine data content
- Define proper toolset based on comprehensive study and analysis of applications and processes
- Develop effective standards for data conversion

Thank You
