# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Structure

- Background and Aim of research approach
- Model of automated determination of site quality / location quality
- Available geodata, weighting approach and quality rating
- Results and validation

ORGANISED BY

PLATINUM SPONSORS

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Background

- Strong increase of property prices, esp. of land prices
- Scarceness of / demand for more reliable land market data
- Supporting Standard Ground Value detection in locations with less market activity (improving market transparency)
- Availability of geodata (e. g. open data initiatives, INSPIRE initiative of EU)

## Aim

- **Automated detection of site quality / location quality by using free available geodata**
- **Comparability of locations at cross-regional level**

ORGANISED BY

PLATINUM SPONSORS

# FIG WORKING WEEK 2019

22-26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

Detection of property-related location quality due to geodata

- Residential locations
- Office locations
- Retail locations
- Logistic locations

Calculation of location quality for different spatial levels

- Automated (by GIS)
- High resolution (500 x 500 m<sup>2</sup>)
- Updating periodically
- Objective and market-orientated

Application of location quality for supporting market analysis and valuation

ORGANISED BY

# FIG WORKING WEEK 2019

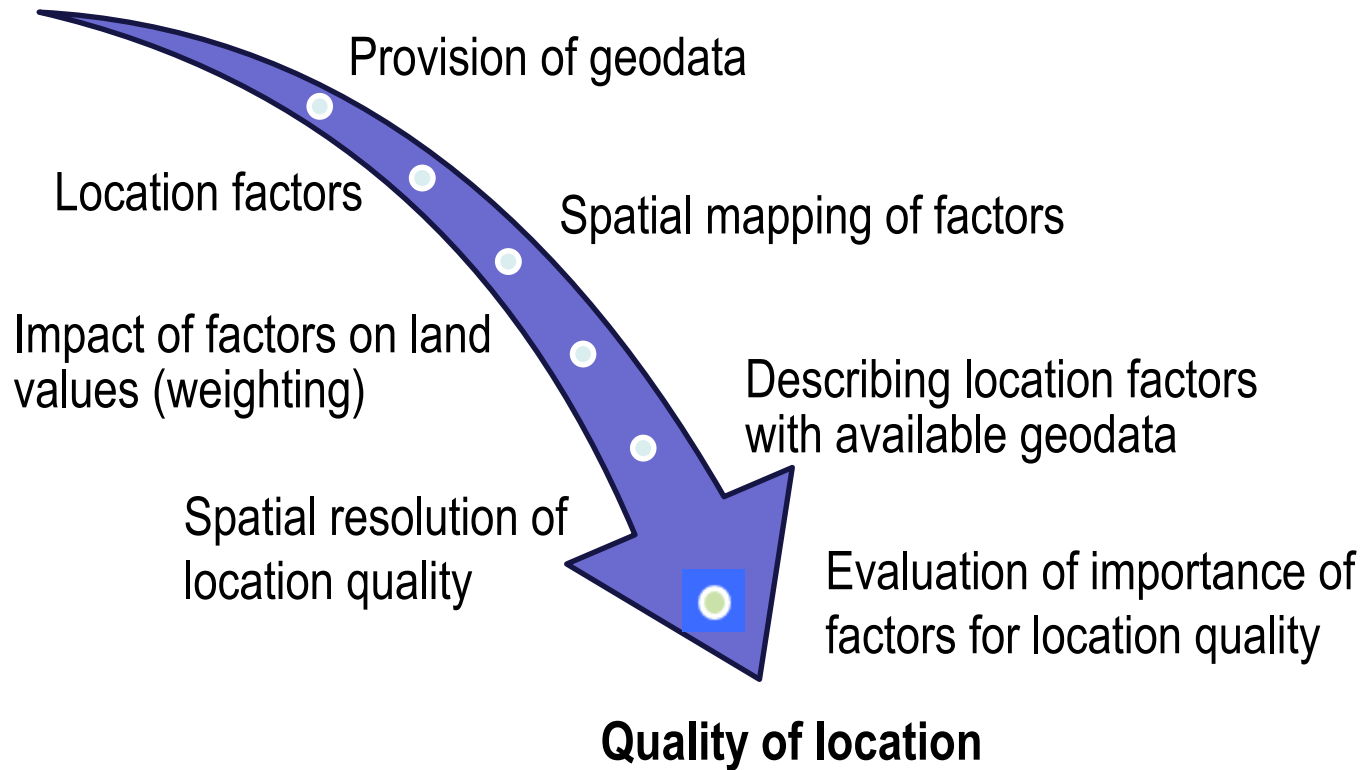

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Differentiation of location factors

- Macro location  
(indicators selected by expert questioning)
- Micro location  
(indicators selected by expert questioning)

Regionalmonitoring-Niedersachsen

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

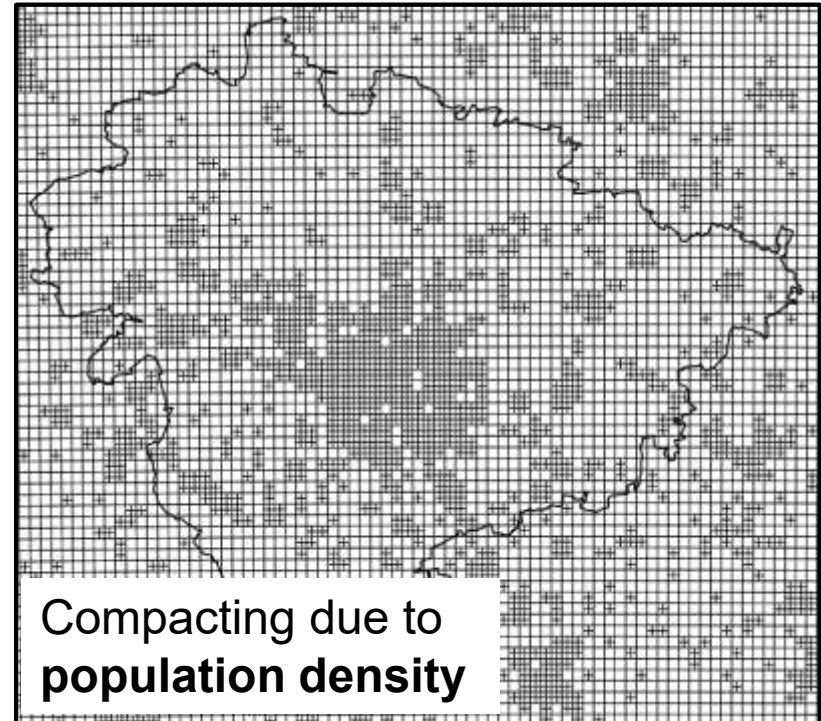

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Two spatial levels of resolution

by INSPIRE Equal Area Grid

- Standard area grid:  
1000 m x 1000 m
- Compacted area grid:  
500 m x 500 m in urbanized  
structures
- Open source GIS solution

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Relevant indicators to determine **macro-location quality**:

Type of land/ property:

**Residential**

Spatial Level:

**Macro level**

Number of selected indicators:

**15 Indicators**

Necessary geodata:

**35 datasets**

Location factors	Geodata sets
Population	Number, density, age distribution of population
Employment	(Un-)employment rate, number of unemployed
Economic performance	GDP, change of GDP
Spending capacity of households	Available income, change of income
Recreational value	Proportion of recreational area, change of area
etc., etc.

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Relevant indicators to determine **micro-location quality**:

Type of land/ property:

**Residential**

Spatial Level:

**Micro level**

Number of selected indicators:

**15 Indicators**

Necessary geodata:

**24 datasets**

Location factors	Geodata sets
Distance to next town center	Distance per grid to large and medium-size town
Vacancy rate	Vacancy rate
Distance to kindergarden	Location of kindergardens
Impact of noise pollution	Road, train and aircraft noise
Broadband access	Quality of broadband
Distance to nature	Public park, waters, forest, preserve areas
etc., etc.

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Impact of location factors on land values (weighting):

- Method: Expert questioning by priority analysis (factor by factor)
- Summarized expert opinions

		...hat im Vergleich zu diesem							Weighting (total)	Weighting (%)
		A	B	C	D	E	F	G		
Dieser Indikator...	A		0	0	1	2	0	1	4	10%
	B	2		2	2	1	0	0	7	17%
	C	2	0		1	1	2	0	6	14%
	D	1	0	1		0	0	1	3	7%
	E	0	1	1	2		0	0	4	10%
	F	2	2	0	2	2		2	10	24%
	G	1	2	2	1	2	0		8	19%
									<b>42</b>	<b>100%</b>

22-26 April, Hanoi, Vietnam

"Geospatial Information for a Smart Resilience"

Evaluation of importance

due to location quality:

Macro-location

Micro-location

Boxplot

Example: Proportion of unemployed people [%]

## Evaluation

**3** (above-average) < 3,3 %

**2** (average)  $\geq 3,3 \%$  /  $\leq 5,5 \%$

**1** (below-average) > 5,5 %

22-26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Summation of importance of location factors :

- Using the evaluation and weighting of location factors
- Summation represents the location quality of an area relatively to all other areas

Macro-location:

Calculation of location quality

Weighting	Faktor 1 10%		Faktor 2 17%		Faktor 3 14%		...		Location quality
	Evaluat	Sum	Evaluat	Sum	Evaluat	Sum			
Municipality 1	1		3		3				
Municipality 2	3	30	2	34	1	14		78	
Municipality 3	2	20	2	34	1	14		68	
...

# FIG WORKING WEEK 2019

22–26 April, Hanoi, Vietnam

"Geospatial Information for a Smarter Life and Environmental Resilience"

## Results - Conclusions

- Automated tool to compare locations at local, regional and supra-regional level (implemented for Lower Sax.)
- Applications in valuation and market analysis
  - NO substitute for valuation !
  - Selection of comparable locations and comparable transactions
  - Plausibilisation of land values
  - Additional information in regions with few transactions
- Methodology is important, system is extendable
  - Automated = short-term updating with small resources, free geodata
  - More detailed geodata available → more detailed grid is possible
- Tool still in progress, not yet finalized
