

Better Living After Covid - the Surveyor Point of View

Paweł Hanus (Poland)

Key words: Keyword 1; Keyword 2; Keyword 3

SUMMARY

The time of the Covid pandemic was a time of challenge and change for all of us, including surveyors. And while the changes in surveying in Poland were not entirely related to the pandemic, the pandemic certainly sped up to them. From the point of view of the contractor of geodetic works, the most important changes during this period include the introduction of digital technical documentation of geodetic works, the acceleration of the change in the method of servicing surveyors to the Internet service, and the transfer of geodetic documentation from the analogue to digital form. These actions resulted in significant, mostly positive, changes in carrying out geodetic work. This presentation provides some details of these changes.
